songNames	6
topLyrics	7

albums	<i>An artist's music albums.</i>
---------------	----------------------------------

Description

Gives information about the albums of an artist/band.

Usage

```
albums(name, message = TRUE)
```

Arguments

name	The name of the artist/band.
message	Should the function print something if the required data is not found?

Details

The variables returned by the function are extracted with the Vagalume API.

Value

`gente` returns a data.frame with information about the albums, as the id, name and year of release.

Author(s)

Bruna Wundervald, <brunadaviesw@gmail.com>.

Examples

```
## Not run:
albums("the-beatles")
albums("chico-buarque")

## End(Not run)
```

artistInfo*Artist Information*

Description

Gives some information about a given artist/band.

Usage

```
artistInfo(name, message = TRUE)
```

Arguments

name	The name of the artist/band.
message	Should the function print something if the required data is not found?

Details

The variables returned by the function are extracted with the Vagalume API.

Value

artistInfo returns a data.frame with the information.

Author(s)

Bruna Wundervald, <brunadaviesw@gmail.com>.

Examples

```
## Not run:  
artistInfo("the-beatles")  
artistInfo("chico-buarque")  
  
## End(Not run)
```

genre	<i>An artist's musical genre(s)</i>
-------	-------------------------------------

Description

Gives information about the genre (ou multiple genres) of an artist/band.

Usage

```
genre(name, message = TRUE)
```

Arguments

name	The name of the artist/band.
message	Should the function print something if the required data is not found?

Details

The variables returned by the function are extracted with the Vagalume API.

Value

genre returns a data.frame with information about the genre(s).

Author(s)

Bruna Wundervald, <brunadaviesw@gmail.com>.

Examples

```
## Not run:
genre("the-beatles")
genre("chico-buarque")

## End(Not run)
```

lyrics	<i>Lyrics of a song.</i>
--------	--------------------------

Description

Gives the lyrics text of a song and the translation text, when the language of the song its not Portuguese.

Usage

lyrics(identifier, type, artist, key, message = TRUE)
```

Arguments

identifier	The identifier of the song.
type	The type of identifier os the song ("name" or "id").
artist	The name of the artist/band.
key	The apikey.
message	Should the function print something if the required data is not found?

Details

The variables returned by the function are extracted with the Vagalume API.

Value

`lyrics` returns a data.frame with information about the artist, the song and the texts.

Author(s)

Bruna Wundervald, <brunadaviesw@gmail.com>.

Examples

```
## Not run:  
identifier <- "A-Day-In-The-Life"  
key <- "your token"  
artist <- "the-beatles"  
type <- "name"  
lyrics(identifier, type, artist, key)  
  
key <- "your token"  
identifier <- "3ade68b4gdc96eda3"  
type <- "id"  
lyrics(identifier = identifier, type = type, key = key)  
  
## End(Not run)
```

Description

Gives information about what artists/bands are related to a specific artist/band.

Usage

```
relatedInfo(name, message = TRUE)
```

Arguments

- `name` The name of the artist/band.
`message` Should the function print something if the required data is not found?

Details

The variables returned by the function are extracted with the Vagalume API.

Value

`relatedInfo` returns a data.frame with information about the related artists.

Author(s)

Bruna Wundervald, <brunadaviesw@gmail.com>.

Examples

```
## Not run:  
relatedInfo("the-beatles")  
relatedInfo("chico-buarque")  
  
## End(Not run)
```

`songNames`

Song names of an artist/band.

Description

Gives information about the song names of an specific artist/band.

Usage

```
songNames(name, message = TRUE)
```

Arguments

- `name` The name of the artist/band.
`message` Should the function print something if the required data is not found?

Details

The variables returned by the function are extracted with the Vagalume API.

Value

`relatedInfo` returns a data.frame with information about song names.

Author(s)

Bruna Wundervald, <brunadaviesw@gmail.com>.

Examples

```
## Not run:  
songNames("the-beatles")  
songNames("chico-buarque")  
  
## End(Not run)
```

topLyrics*Top lyrics of an artist/band*

Description

Gives information about the top lyrics (most viewed) about an specific artist/band.

Usage

```
topLyrics(name, message = TRUE)
```

Arguments

name	The name of the artist/band.
message	Should the function print something if the required data is not found?

Details

The variables returned by the function are extracted with the Vagalume API.

Value

`topLyrics` returns a `data.frame` with information about the top lyrics.

Author(s)

Bruna Wundervald, <brunadaviesw@gmail.com>.

Examples

```
## Not run:  
topLyrics("the-beatles")  
topLyrics("chico-buarque")  
  
## End(Not run)
```
